Introduction

Department of Design aims at inspiring innovative thinking and cultivating talents of design. In addition to focusing on transmission of professional knowledge and skills, our department educates students to develop collaborative design ability in multi-disciplines as well. Department of Design emphasizes interdisciplinary learning and encourages active participation in related fields. In addition, the department actively holds academic forums, workshops, seminars and international exchange activities to improve aesthetic sense, develop sensitivities of art as well as broaden the horizon.

Instructional Objectives

In order to keep up with the trend of international creative design industries and the demand for creative design talents in Taiwan, it is importance to think beyond the traditional design division and, emphasize the cultivation of talents with interdisciplinary and innovative thinking, macroscopic vision-scope and integrated planning. The main principle of cultivation is to inspire students to develop essences of innovation and creativity, a sense of beauty, professional expertise and multifaceted knowledge.

Degree Requirements

Undergraduate Program

Major in interdisciplinary design that covers a range of design fields.

Master's Program

The courses are separated into "Visual Design" and "Product and Service Design", which provides students to learn about advanced specialties.

Doctoral Program

To equip students with global vision and integral design ability.

Feature of the Curriculum

The curriculum is designed to focus on design thinking of interdisciplinary collaboration, and to provide learning environment for students with different design expertise. Our department establishes cultural and creative industries center which is an exchange platform for integrating industry, government, university and institute. The center provides a variety of professional projects from Ministry of Education, Ministry of Culture, Ministry of Economic Affairs, Ministry of Science and Technology and industrial circles for students to carry out a plan and design practical training.

Career Prospects

- Continuing Education: To study domestically or overseas, such as visual communication, product and interior design, cultural and creative and digital media, and etc.
- Career: To engage in industries, for example, being advertising designers, product designers and interior designers. In addition, they serve as a cultural and creative staff in public administration or educationalist in educational circles.
