Introduction

Our department is the first in Taiwan to offer specialized knowledge in physical education (PE) and sports, and our department takes a leading and prominent place in PE and Sport Science academic research.

- In-service training program and abundant resources provided
- Excellent teaching team equipped with both theoretical and practical knowledge which carries out quality instruction and assessment, maintains the quality of learning and focuses on effective teacher-student interactions
- Our instructors specialize in scientific research and humanistic research which includes six disciplines and have made exceptional achievements with their full efforts in advising students, running research programs and executing industry-university cooperative research projects.

- Concrete rewards are offered to actively encourage students to learn the second foreign language, develop academic and practical skills, and earn relative certifications.
- Apart from outstanding performance in sports competitions, our students also show such great passion for service that they often hold well-praised events to promote circle-island tours or to serve remote areas as volunteers.

Objectives

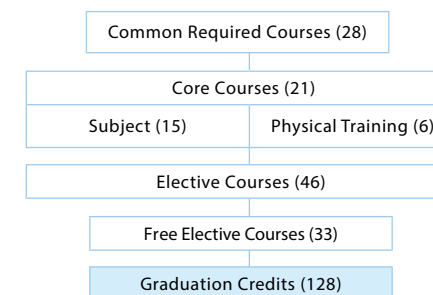

- To cultivate physical activity-related knowledge, skills, and to broaden practical experience.
- To cultivate excellent PE and sports experts.
- To cultivate PE and sports-related international horizons and diversified leadership.
- To cultivate the awareness of physical activity research through advanced courses.

Features of the Curriculum

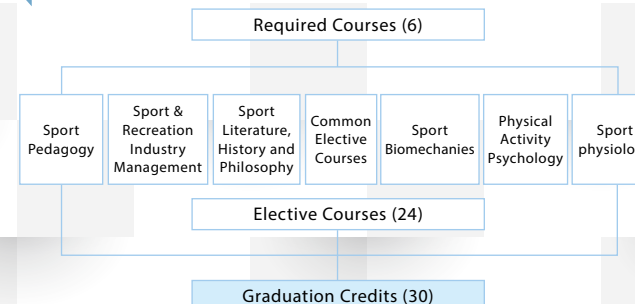

- Integrating theory and practice, our curriculum offers advancement in both academia and practical fields.
- In the promotion of physical activity-related research, we have divided research fields into six different areas: (1) integrated literature, history, philosophy in sports, (2) sports pedagogy, (3) integrated sports and recreation industry management, (4) sports physiology, (5) sports biomechanics, and (6) psychology of physical activities.
- We have integrated research human resources to formulate interdepartmental, intercollegiate research projects and industry-university cooperative courses.
